

HP P3005 Formatter Base – Informational Product Update

Model Q7812A (P3005) Simplex only (Q7847-61004-RX and RO);

- When the printer's memory only counts to 48mb on initial startup without memory installed, and the configuration page does not have duplex option. This board is for the base model printer Q7812A, NO NETWORK CONNECTOR

Model Q7813A (P3005d) Duplex only (Q7847-61004-RX and RO);

- When the printer's memory counts up to 64mb on initial startup without memory installed and the configuration page has the duplex option. This board is for duplex base model printer Q7813A, NO NETWORK CONNECTOR

Model Q7814A, Q7815A, Q7816A (P3005n, P3005dn, P3005x) (Q7848-61004-RX and RO);

- When the printer's memory counts up to 64mb on initial startup and has a network connector the network will not work. User must transfer the 16mb memory dimm from the original formatter to receive a total of 80mb for the embedded network to work.
 - This Board is for all network P3005 printers with and without duplex, HAS NETWORK CONNECTOR. (NOTE this board may upgrade the printer from P3005n to a P3005dn)
